

Catalyst Sales & Testing

MEGTEC catalyst formulations deliver superior effectiveness, longevity, and resistance to masking. MEGTEC has the experience gained over more than 35 years of meeting industry emission issues, and as regulations have changed, so have our formulations. We have experience in the systems, the equipment, the chemistry, and the industries we serve.

Long-lasting formulation. A patented support structure prolongs catalyst life by maintaining high activity levels longer, even in the presence of poisons or masking agents.

High VOC destruction. MEGTEC catalysts achieve conversion efficiencies greater than 99% in most applications — well above EPA requirements. MEGTEC catalysts get you into compliance and ensure that you'll stay in compliance longer.

On-site catalyst testing. MEGTEC is the only catalyst and equipment company with its own on-site laboratory. This allows us to respond to your catalyst service needs quickly, with proven solutions to issues you may have. We test your catalyst samples for activity, surface area, and contamination, identifying minor changes before they become major problems requiring costly catalyst replacement.

Expert catalyst replacement. When your catalyst needs replacement, turn to MEGTEC. We work with your staff to determine what type of replacement catalyst is best for your specific situation. We'll help you figure out how much you need, and if required, retrofit your unit to accept the new catalyst. MEGTEC personnel are experts at installing our products.

Disposal services. MEGTEC can also help you with disposal of spent catalyst.
